

THREE-PHASE RECESSED TRACKS

Our recessed electric tracks are systems of three-phase tracks, namely with three circuits on the same line, suitable for different environments such as museums, shops, flats, offices and much more.

The possibility to place these tracks in different schemes, without modifying the original system, can satisfy every lighting need. Moreover the lighting points can be increased, in order to be adapted to every lighting change. Mains voltage 230/250V – maximum 16 Ampere.

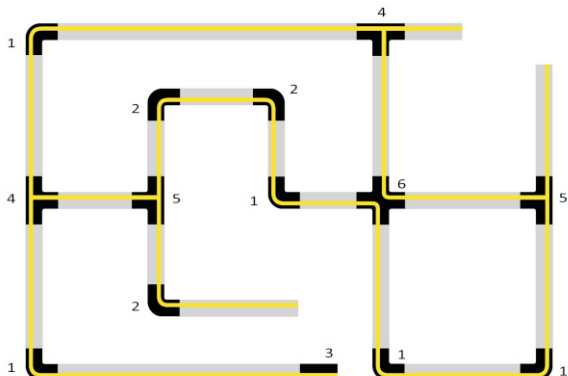

These systems include a wide accessory range, linear, angular, T, crossed and flexible connectors, which allow the match of more than one electric track.

The continuity (among each element) of the earthing system is very important in order to have a correct installation of all accessories which contribute to the three-phase track composition. The earth conductors of each component must be placed consequentially.

The recessed three-phase tracks are available in white and in two lengths (1 or 2 meters).

Models:

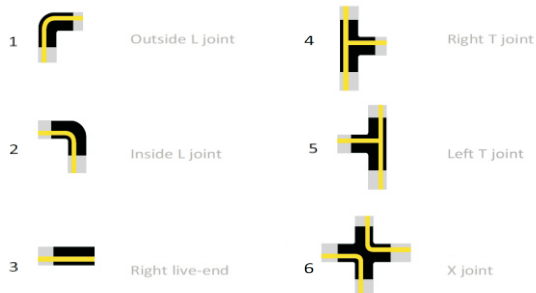

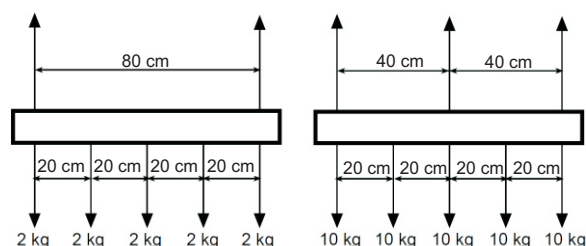

- 333101 1 meter / white
- 333104 2 meters / white

Live end with earth on the left L
